

**HUMAN CARE**  
Your Life. Your Way.

**Healthcare Beds**

# Introduction

We produce and provide lifting solutions for people with special needs. Our products are made to serve as a natural part of life to all our users.

Human Care has a proud history in patient care. Since being founded in 1993, our twenty years of experience is expressed through a broad selection of premium products offering high customer value and satisfying all customer needs.

Our main product areas are: Healthcare Beds, Mobility Aids, Lifting Solutions, Convertible Chairs, and Bathroom Safety Products for people with reduced mobility.

With headquarters in Stockholm, Sweden, and subsidiaries in the USA, Canada and Australia, we collaborate with distributors to provide solutions in more than twenty countries.

Our promise is safety, quality and usability. In all of our products, we exercise only the highest quality to make sure that every detail, every aspect, every function will deliver that promise made to our users.

**Welcome to Human Care.**

# Your Life. Your Way.

That is what we have been offering people with reduced mobility for over 20 years. Your Life. Your Way. Our focus is simple. We work for our users. Our products serve to be a natural part of life to anyone who might need them. Meeting that need is what drives and motivates us. Our mission is to improve the quality of care for people with special needs. Being taken care of by someone else – to literally be in someone else's hands – is a special situation. It demands trust, respect, a fine touch and – not least – safety for both user and caregiver.

Our solutions provide reliability, high quality and innovation. With low-maintenance requirements and efficient installation procedures, we provide a state-of-the-art offering for both users and caregivers.

In every detail, in every aspect, our products deliver what they promise.

## Floor-level-beds reduce fall injuries without the use of restraints\*

**10 cm (Four inches). That is the difference between “falling” – or “rolling” – out of bed!** So small a distance, yet so large a difference between extended hospital stays and cost – or their avoidance. Our range of Healthcare beds aims to reduce fall injuries and provide the opportunity for excellent care.\*

**Dignity.** Functioning at a floor level, restraints are minimised, thereby greatly enhancing the dignity of care. One may elect to call it ‘dignity’. We choose to simply call it ‘care’. Human Care.

## Fall injuries cause pain – and cost

Patient falls are widely recognized as a significant healthcare risk, as well as a cost. Pain, cost, complication, extended rehabilitation stay – and even death – are just some of the dire consequences of a bed fall.

\* Barker A., Kamar J., Tyndall T. and Hill K. (2013) Reducing serious fall-related injuries in acute hospitals: are low-low beds a critical success factor? Journal of Advanced Nursing 69 112-121

**The risk of falling.** Patients who are at risk of falling are not protected from the impact of a fall if the bed only descends to a height of 20 cm (8 inches). That distance to the floor – although appearing small and harmless – can still lead to serious injuries.

**Avoid fall injuries.** On a floor-level-bed with a minimum height of less than 10 cm (4 inches), the gap from the bed to the floor is small enough to avoid a hazardous drop distance. Thus, the risk of bed-fall injuries is avoided, offering safety – as well as dignity – to the user. Our range of premium beds – featuring all state-of-the-art functions expected in today's leading healthcare equipment – reduces patient's risk of bed fall injuries to an unprecedented low.

**Improve the working position.** A challenge in today's healthcare is the working position of caregivers. To resolve this problem, the floor-level-beds may be raised to any ergonomically suitable height up to 799 mm (31 inches) from the floor, creating an optimum working height that reduces back injuries risks for all caregivers.

*” Our mission is to improve the quality of care and freedom of movement for people with special needs ”*

## Care and quality

A user of a product from Human Care is a person who feels very confident with the product's quality and reliability. At all times. Every step of the way. The reason behind this is our profound commitment to safety, quality and usability.

Firstly, our products are designed and manufactured to meet the requirement of relevant ISO and EN standards. Secondly, every single product is given extensive attention at every stage of the design process. Thirdly, in developing our products, our design team collaborates with globally leading physiotherapists, creating state-of-the-art products which all share the same ultimate goal: the benefit and enjoyment of their users. Allowing them to live life in the best way possible. Their way.

*” 10 cm (4 inches) makes the difference between falling or rolling out of bed – These 10 cm avoid extended hospital stays and direct costs. ”*

Human Care's FloorLine-i Plus, FloorLine-i and FloorLine LTC beds are all electric true floor-level-beds that go down to an ultra-low level less than 10 cm (4 inches) above the floor as measured from the top of the mattress platform.

## Floor-level-beds

Human Care's electric floor-level-beds provide both a safe and a convenient way of taking care of patients and residents in hospitals and nursing/long-term care facilities. Placed at a true floor level they provide a vital care factor for those who may be at risk for falling out of bed and when raised they provide an ergonomically safe working height for any caregiver.

# FloorLine-i Plus

## Floor-level-bed for hospital environment

- A complete management solution
- Maximum height adjustable
- Future proofed for adding of accessories.

The aesthetically appealing FloorLine-i Plus is a complete care management solution. With its extensive range of features such as trendelenburg, cardiac chair position and electronic CPR function, this bed offers the best possible care. With its open bus digital control box it is also future proofed for adding even more accessories.

The FloorLine-i Plus is the perfect solution for preventing fall injuries. Its minimum height from the floor is just 10 cm (3,9"). At the same time no compromises are made for excellent ergonomic working height reaching 80 cm (31,4").

The bed also has the optional of central locking castors. This feature detects when the bed has not been moved for 60 seconds, locks the castors and puts the bed in safe mode. These castors helps reducing the risk of fall injuries caused by a moving bed due to castors not being locked.
